why have island ecosystems always suffered such high rates of extinction in our age with all the world's landscapes from tasmania to the amazon to yellowstone now being carved into island like fragments by human activity the implications of this question are more urgent than ever over the past eight years david quammen has followed the threads of island biogeography on a globe encircling journey of discovery

although everybody is familiar with the dodo bird very few people know its history yet this history is compelling when read as a fable of the negative impact of humans on earth's ecosystems the author describes the complexity of the factors involved in animal extinction although we think of ourselves as more ecologically aware than our ancestors we are propelling extinction to alarming rates

the story of the dodo is a classic of evolution and extinction equal in fascination to that of the dinosaur or the saber toothed tiger unlike these however the dodo was the first recorded example of an extinction that was in all probability entirely caused by humans humankind coexisted with the dodo between 1598 and 1681 and then the dodo was gone hunted to extinction unable to escape the new predators that arrived in ships on the isolated island later known as mauritius the giant pigeon for this was what the dodo was evolved from ancestors that had populated the island millions of years before in the pleistocene period when mauritius was far adrift of where it lies today the pigeons colonized an island paradise abundant with food free of any terrestrial mammalian predators over millions of years they lost their instinct for danger they also lost the ability to fly and grew bulky with sturdy running legs for the 17th century sailors who arrived and settled on the island they were easy to kill and as tasty as the turtles the sailors also caught and ate the sailors introduced domestic animals and rat as well competitors for the dodos habitat so much about the dodo is unknown and

will never be known and yet the dodo engenders much speculation the dodo extinction in paradise explores the science and the mythology the history archaeology and legend as well as the dodo's place in art and literature

includes pictures includes excerpts of contemporary accounts about the dodo includes a bibliography for further reading the dodo never had a chance he seems to have been invented for the sole purpose of becoming extinct and that was all he was good for willy cuppy 19th century american humorist and literary critic at one point or another just about everyone has heard of the dodo bird which is almost universally described as a cuddly whimsical creature renowned for its alleged stupidity this prehistoric avian had been known for hundreds of years before it was made popular around the world in lewis carroll's 1865 classic alice's adventures in wonderland the character the dodo satirized the author himself according to pop culture lore carroll whose real name was charles lutwidge dodgson regarded the dodo as his spirit animal due to his alleged stutter which led to him often presenting himself as do do dodgson carroll was also a frequent patron of the oxford museum of natural history which served as a fount of inspiration for his memorable anthropomorphic characters the 1951 disney animation alice in wonderland breathed new life into carroll's dodo portrayed as a plump peach faced creature with a bulbous pink beak clad in a purple waistcoat a powdered wig and a pipe dangling out of his beak like its real life counterparts the dodo was depicted as a flightless bird who crossed paths with alice bobbing along inside of a bottle upon the open sea owing to its inability to fly the dodo uses an upside down toucan as his boat and the dodo is being maneuvered by a green hawk furiously flapping its wings serving as the boat's propeller the dimwitted carefree dodo also made various appearances in film and tv shows over the years such as yoyo dodo in the 1938 black and white animation porky in wackyland the short lived stop motion animated series rocky and the dodos and the 2002 animated film ice age which depicts the dodos as a silly clumsy troop of birds who fail to guard three small watermelons indeed the dodo's presence in literature picture books music video games and general pop culture has been so prevalent that it has secured its own entry on tv tropes where it is infamously immortalized as the dumb dodo this only scratches the surface of the string of misconceptions that has plagued the delightfully peculiar bird for centuries along with its stereotypical depictions in literature film and other mediums of pop culture a number of idioms playing on the bird's alleged idiocy as well as the supposed role it played in its own extinction have become irreversibly cemented in the english lexicon dodo and the even less tactful dumb dodo are slang terms directed at dense individuals an explicit reference to the bird's sluggish reflexes and supposedly pint sized brain one may have also come across a business venture or a fad that has gone the way of the dodo or is as dead as a dodo meaning that the venture has become defunct obsolete or a thing of the past most likely due to reckless and half baked business practices the phrase deaf to reality like a dodo has also been thrown around quite frequently in recent years used to describe individuals who are overly trusting and blissfully ignorant of unpalatable facts and ugly truths but were the dodo birds truly as simple minded as they are often portrayed and what were the actual factors behind the zany avian's extinction the dodo the history and legacy of the extinct flightless bird looks at the origins of the bird human contact with it and how the species went extinct along with pictures depicting important people places and events you will learn about the dodo like never before

this account of two extinct bird species offers an amazing amount of history references facts maps and illustrations library journal the dodo and the solitaire is the most comprehensive book to date about these two famously extinct birds it contains all the known contemporary accounts and illustrations of the dodo and solitaire covering their history after extinction and discussing their ecology classification phylogenetic placement and evolution both birds were large and flightless and lived on inhabited islands some five hundred miles east of madagascar the first recorded descriptions of the dodo were provided by dutch sailors who encountered them in 1598 and within a century the dodo was extinct so quickly did the bird disappear that there is insufficient evidence to form an entirely accurate picture of its appearance and ecology and the absence has led to much speculation this extraordinary book pieces together the story of these two lost species from the fragments that have been left behind an up to date and comprehensive review of everything we know about the dodo and solitaire journal of vertebrate paleontology

well versed in natural history particularly geology and ornithology hugh edwin strickland 1811 53 became fascinated by the dodo and mankind s influence on its extinction seeking to investigate this flightless bird and other extinct species from islands in the indian ocean he invited the comparative anatomist alexander gordon melville 1819 1901 to help him separate myth from reality divided into two sections this 1848 monograph begins with strickland s evaluation of the evidence including historical reports as well as paintings and sketches many of which are reproduced melville then analyses the osteology of the dodo and rodrigues solitaire describing his findings from dissections of the few available specimens and making comparisons with similar species a seminal work it correctly concluded that the dodo was more closely related to pigeons than vultures and the book also inspired others to take up the search for new fossil evidence
